NETWORK INFORMATION THEORY

OMISSIONS TO ALL PRINTINGS

p. 220, Bibliographic Notes, line 14 should read:
The capacity region of the deterministic broadcast channel was established independently by Marton (1979a) and Pinsker (1978).

ERRATA TO THE SECOND AND THIRD PRINTINGS

p. 52, lines 2 and 3 should read:
... energy per bit $E > (2^{2R} - 1)/(g^2R)$ is ...

p. 85, Proposition 4.1, line 2:
$aR_{11} + \bar{a}R_{21} \rightarrow aR_{11} + \bar{a}R_{12}$

p. 121, 1 line below (5.9):
$|U| \leq \min\{|X|, |Y_1|, |Y_2|\} + 1 \rightarrow |U| \leq \min\{|X|, |Y_1| + |Y_2|\} + 1$

p. 143, Theorem 6.4, line 11:
$|Q| \leq 6 \rightarrow |Q| \leq 7$

p. 146, line 2 should read:
... $y_1$ and $y_2$ are injective in $t_2$ and $t_1$, respectively ...

p. 155, line 13:
$U_{2,6} = Y_{1,3}$ and $U_{2,5} = Y_{1,2} \rightarrow U_{2,5} = Y_{1,3}$ and $U_{2,6} = Y_{1,2}$

p. 163, Problem 6.16 (a), line 11:
$|Q| \leq 6 \rightarrow |Q| \leq 7$

p. 223, line 5:
$\lambda_{m_2m_1} \rightarrow \lambda_{m_1m_2}$
2 NETWORK INFORMATION THEORY

p. 223, line 13 should read:

...upper bounded by \((2^P)^{n^2/2}\) for \(n\) sufficiently large.

p. 223, lines 19–21 should read:

...upper bounded by

\[ \frac{2^n(R_1+R_2)}{n^4} \left(2^P\right)^{n^2/2} \]

for \(n\) sufficiently large. Further show that ...

p. 230, line -14:

\(\Phi\Phi^T \leq I_R \quad \rightarrow \quad \Phi\Phi^T \leq I_r\)

p. 242, lines -2 and -3 should read:

\[ R_1 < \frac{1}{2} \log |G_1 K_1 G_1^T + I_r|, \]
\[ R_2 < \frac{1}{2} \log \left| \frac{G_2 K_2 G_2^T + G_2 K_1 G_1^T + I_r}{|G_2 K_1 G_1^T + I_r|} \right| \]

p. 313, line -12 should read:

The quadratic Gaussian distributed source coding problem was studied ...

p. 347, lines 6–9 should be without the inactive fourth inequality as:

\[ R_0 + R_1 \geq H(U_1), \]
\[ R_0 + R_2 \geq H(U_2), \]
\[ R_0 + R_1 + R_2 \geq H(U_1, U_2). \]

p. 347, lines 11–13 should read:

As seen from the extreme points above, the first two inequalities can be simultaneously tight while the third can be individually tight. Interestingly, the values of the common rate \(R_0\) corresponding to these two cases lead to several notions of common information.

p. 347, lines 17 and 18 should read:

**Mutual information.** The minimum sum-rate is \(H(U_1, U_2)\). With no common rate, i.e., \(R_0 = 0\), the minimum sum-rate jumps to \(H(U_1) + H(U_2)\). The difference between these two sum-rates is the mutual information \(I(U_1; U_2)\) and represents the value of having a common link.

p. 485, line 4 should read:

noise components \(Z_k, k \in [1 : N]\), are i.i.d. \(N(0, 1)\).

p. 497, line 3 should read:

are \(1, \ldots, N'\), where \(N' \geq N/9\), and
p. 497, lines 5 and 6 should read:

the symmetric capacity for these source nodes, and hence the symmetric capacity for all
source nodes, are upper bounded by

p. 497, line 8:

\[ [N' + 1 : 2N'] \rightarrow [N + 1 : N + N'] \]

p. 497, line 13 should read:

...for \( k \in [N + 1 : 2N] \), which does not affect the order of the upper bound since \( N' = \Theta(N) \). Thus, each ...

p. 498, line 6:

\[ I(X^N, Y_{N+1}^{2N}) \rightarrow I(X^N, Y_{N+1}^{2N} | X_{N+1}^{2N}) \]

ERRATA TO THE FIRST PRINTING

p. xviii, Organization of the Book, line 5 should read:

...we first study channel coding settings, followed by ...

p. 46, item 3 above Lemma 3.1 should read:

...conditionally independent given \( U^n \) that has ...

p. 67, line 8 should read:

Because the maximal probability of error ...

p. 69, Bibliographic Notes, line 10 should read:

Hence, we will adopt the random codebook generation and joint typicality decoding approach throughout.

p. 70, line -4 should read:

\[ \lim_{n \to \infty} P\{d(X^n, \hat{X}^n(m(X^n))) \leq D\} = 1 \]

p. 84, Proof of the converse, line 4 should read:

where \( \epsilon_n \) tends to zero as \( n \to \infty \). Thus, for any \( \epsilon > 0, (R_1 - \epsilon, R_2 - \epsilon) \in \mathcal{C}'(n) \) for \( n \)
sufficiently large. This completes the proof of the converse.

p. 86, Theorem 4.2 should read:

The capacity region \( \mathcal{C}' \) of the DM-MAC \( p(y|x_1, x_2) \) is the convex closure of

\[ \bigcup_{p(x_1)p(x_2)} \mathcal{S}(X_1, X_2). \]

p. 91, 2 lines above (4.4) should read:

...we have shown that the rate pair \( (R_1, R_2) \) must be in \( \mathcal{C}' \), which is the closure of the set of rate pairs \( (R_1, R_2) \) such that
p. 97, Figure 4.10 should look:

```
\begin{align*}
\text{Encoder} & \quad \text{Decoder 1} \\
M_2 & \quad \hat{m}_2 \\
\text{Encoder 2} & \quad M_1 - \text{decoder} \\
x_2^n(\hat{m}_2) & \quad g_2 \\
+ & \\
\text{Decoder 1} & \quad \hat{m}_1
\end{align*}
```

p. 98, Theorem 4.5, line 4 should read:
for some pmf $p(q) \prod_{j=1}^{k} p(x_j | q) \ldots$

p. 101, last sentence of Problem 4.5 should read:
Show that the capacity region $\mathcal{C}$ can be characterized as the closure of $\bigcup_k \mathcal{R}^{(k)}$.

p. 113, line above (5.3) should be an inequality:
$$I(X_1; M_1, Y_1^n; Y_1 | U) \leq \sum_{i=1}^{n} I(X_i, M_1, Y_1^{i-1}; Y_1 | U)$$

p. 129, Problem 5.18, line 3 should read:
...sender 2 encodes only $M_0$.

p. 134, Remark 6.1, line 6 should read:
...larger than the convex closure of the union of $\mathcal{R}(X_1, X_2)$ over all $p(x_1)p(x_2)$.

p. 147, line -12:
$$H(Y^n_2 | X^n_i) \rightarrow H(Y^n_2 | X^n_2)$$

p. 151, line above Theorem 6.6 should read:
...achievable within half a bit.

p. 155, line 4 should read:
...where $A$ is an $L \times LC_{\text{sym}}$ q-ary matrix. Decoder $j$ ... 

p. 163, Problem 6.16 (a) should read:
...when evaluated with Gaussian inputs (without power control), reduces to ...

p. 181, Analysis of the probability of error, line 6 should read:
$$\mathcal{E}_3 = \{(U^n(l), Y^n) \in \mathcal{T}_c^{(n)} \text{ for some } l \notin [1 : 2^{n(k-R)}]\}.$$ 

p. 186, Proof of Theorem 7.4, line 3 should read:
...with DM state and nonnegative cost function $b(x), x \in \mathcal{X}$. We assume an input cost constraint
p. 209, Analysis of the probability of error, line 7 should read:

\[ E_{12} = \{ (U^n_1(l_1), Y^n_1) \in T^{(n)}_e (U_1, Y_1) \text{ for some } l_1 \notin \{1 : 2^{n(R_1 - R_e)}\} \}. \]
